

Durable, low maintenance and attractive, ARBS Metal Weatherboards are a perfect alternative to traditional weatherboards, without the associated problems that come with timber cladding.

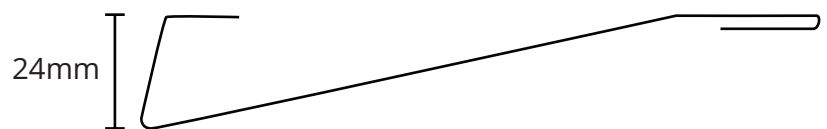

This profile also offers a classic look, once only achievable with a timber finish. Offering a durability and strength that timber just can't match.

Interlocking panels with concealed fixings make up this durable cladding system and suitable for any residential or commercial application. Our Metal Weatherboards are completely fire resistant and waterproof, with minimal maintenance required.
